

Catalogue: **Park & Playground Equipments**

Category: **Robinia Play Structures**

Code: **PE02325**

Description:

Multi-game structure made entirely of locust wood. The black locust poles are debarked and smoothed, thus making the finished product appear soft and natural, perfectly integrated with the surrounding environment. The structure is composed of a tower covered by a 2-pitch roof in wooden slats with a polyethylene slide (H 130 or 95 cm) and another tower equipped with climber, pole and ladder. The towers are connected via a rickety bridge with nylon rope parapet. Under the platform with the polyethylene slide there is a table with benches made entirely of wood. The castle is also completely finished with screws equipped with safety closing caps. On request with steel slides.
