

Catalogue: **Furniture for Nursery and Preschool**

Category:

Code: **SZ32001**

Description:

PVC cover, tailorable, washable, suitable for all the needs of indoor or outdoor spaces.

Safety protection for radiators and convectors.

Made of fireproof PVC class 1 fire resistant and non-toxic.

Tubular of 50 mm diameter and internal vertical diameter 30 mm. It joins pressure and joins through fittings in order to make them solidly assembled (not easy to disassemble) and sensitive to sliding along the joints when the hand passes.

The structure will then be fixed to the wall or to the floor through articulated monobloc brackets, threaded caps or uprights in galvanized iron.

The distance between the vertical tubes guarantees the passage of the heat produced by the radiator.

Ideal for protecting against protruding elements of radiators, which often cause trauma and injuries, thus improving children's safety, whether they are in public environments (schools and hospitals) or private homes.

Coloration:

External pipes - white

Internal tubes - white, yellow, orange, red, blue, dark green

Fittings - white, blue, red
