

Catalogue: **School and Community Furniture**

Category: **Wall soundproofing panels**

Code: **20534012**

Description:

Soundproofing panel made of completely recycled material (polyester) with variable density, which allows to obtain a selective absorption at different frequencies and therefore to optimize the acoustics of the environment despite the very low thickness of the panels.

The absence of frames and seams and the peculiarity of the material with which the panels are made, make them extremely light, not bulky and adaptable to any environment.

The panels can be fixed on each support: masonry, plasterboard, glass; working on both horizontal and vertical surfaces.

Then there are accessories that allow you to extend the compositional solutions to infinity (to be quoted separately).

Available in various colors
